Summary

I lead Google's efforts in building AI systems for time-series sensor data and personal health. I directed the research and development behind Google's frontier models in personal health, including the Large Sensor Model, Personal Health LLM, SensorLM, and the Personal Health Agent (<https://health.google/ai-models/>). I am also a core contributor to Gemini 2.5's tabular reasoning and data science reasoning.

My research interests lie at the intersection of large-scale machine learning, AI for health and science, and language model reasoning. I have published over 60 peer-reviewed papers in top venues spanning machine learning (NeurIPS, ICLR, ACL, EMNLP), mobile and ubiquitous computing (CHI, IMWUT/Ubicomp), and health (Nature Medicine, Nature Communications). My work has been featured in oral presentations at NeurIPS, ICLR, and EMNLP, as well as in public media outlets including The Verge, CNET, Google Keyword, IEEE Spectrum, ACM TechNews, and GeekWire.
